Dear Hiring Manager,

My name is Xiaoyu Fu, a recent graduate of a data science certification with a strong foundation in statistical modeling, machine learning, and data manipulation. I just completed my undergraduate degree two months ago, and my major is mathematics. As a Springboard data science trainee, I'm skilled in Python, R, and scikit-learn for developing predictive models and extracting insights from complex datasets. Adept at presenting complex findings to technical and non-technical stakeholders. Eager to leverage skills to drive data-driven solutions for business growth and informed decision-making. Working at Apple is an exciting opportunity to join a leading technology team and use my skills to contribute to the company.

I studied mathematics for the first half of my studies, but I think combining mathematics with data science will create greater benefits. As a Springboard data science trainee, I use predictive modeling techniques to analyze real-life business data and help companies create higher profits. Also build a model for the price range of the company's products. These experiences taught me not only analysis but also accurate modeling and prediction, allowing me to bring these skills to Apple.

In addition to my professional experience, I possess strong technical and interpersonal skills. I can code in multiple languages and use multiple data management tools, including python and MySQL. This year, I became a Google Analyst 4 Certified Solutions Specialist in Data Management and Analytics, and I'm eager to continue building my skills through more certification programs and learning opportunities. I am a good communicator and believe in the importance of collaboration in IT management.

I have attached my resume to this document along with a letter of recommendation from Springboard data science program advisor Michelle. If you have any questions about my qualifications or career goals, please contact me. Thank you for your time and consideration. I look forward to speaking with you soon.

Sincerely,

Xiaoyu Fu
